Data sheet(s) for additional site (Number of data sheets _____)

Extract from official business register

Bag design to be approved

Definitions

Multisite company

An organisation which is identified in having a central function relating to pellet production or trade (normally and hereafter referred to as a 'central office'). Here certain activities relating to quality management are planned, controlled, and managed within a network of local offices or branches (sites) at which such activities are fully or partially carried out.

Typical cases of a multisite company are:

- a) a producer with a network of production sites, storage sites, delivery trucks, and/or sales offices that are a part of a single legal entity or are separate legal entities but with the managerial control by the legal entity of the producer;
- b) a trader with a network of other traders with or without delivery trucks, storage sites, or/and sales organisations that are a part of a single legal entity or are separate legal entities but with the managerial control by the legal entity of the certified trader;
- c) a company outsourcing activities to a service provider without a valid ENplus® certification.

Small-scale delivery

A delivery of bulk pellets to an end-user that does not exceed 20 tonnes. This excludes deliveries of pellets in big bags and vending machines.

NOTE: A typical example of a small-scale delivery is a delivery of pellets to more end-users (households) along a single route (multi-drop).

Large-scale delivery

A delivery of bulk pellets to a customer other than the small-scale delivery.

NOTE: Examples of large-scale delivery: a delivery of a complete truck load to one end-user above 20 tonnes, a delivery to a trader, a delivery by trains or vessels, a delivery of big bags.

Bagged pellets

Pellets in a packaging unit that protects the pellets from quality degradation with a filling weight between 5 kg and 50 kg.

Bulk pellets

Pellets other than bagged pellets produced, stored, handled, or transported loose.

NOTE: Bulk pellets also include pellets in big bags.

Big Bag

A flexible intermediate bulk container (FIBC) made of flexible fabric that is designed for storing and transporting bulk pellets with a typical capacity of 1,500L. A delivery of pellets in big bags is considered a delivery of bulk pellets.
