## ENplus<sup>®</sup> Newsletter

December 2021

**Dear Pellet Professionals,**

Welcome to the year-end edition of the ENplus<sup>®</sup> newsletter!

Another successful year for the ENplus<sup>®</sup> certification has passed. I am excited to share with you that over 150 companies have been certified in 2021 and more than 14 million tonnes of certified pellets have been produced, according to our preliminary estimations.

This year, we put more effort to support ENplus<sup>®</sup> certified companies by focusing much of our communication towards pellet consumers. Educating them about the value of the certification seal will not only bring more profit for the certified pellet producers and traders but will strengthen the demand for quality in the pellet market.

Undoubtedly, the surge in gas and electricity prices this winter and the available funds in many European

countries will motivate more and more end-users to start using pellets as a heating solution for their homes. Therefore, I look to the future with a sense of optimism and hope for an even more ambitious expansion of the residential pellet market.

I wish you a happy and peaceful holiday season!

**Pablo Rodero**  
EPC President

2021 was a year in which ENplus<sup>®</sup> continued to expand, but also prepared to evolve the certification scheme. >>
